

CLAIMS

- 1 1. A method of monitoring assets across a supply chain, whereby each
2 asset has a RFID tag coupled thereto, the method comprising:
3 forming a network of RFID tags by conducting a BFS for all tags within
4 proximity, whereby existence in the network conveys the existence and location of the
5 corresponding assets in the supply chain; and
6 polling the network of RFID tags to monitor the environmental conditions
7 surrounding the corresponding assets.
